Basel, 7/17/83

to whom it may concern:

In my work and studies as a psychologist (grad. at Zurich University) and teacher of educational matters, I have oriented my ideology on philosophers and scientists like: Heinrich Pestalozzi, Sigmund Freud, Carl Gustav Jung, Rudolf Steiner, Fritz Pearls, Carl Rogers, Thomas Gordon - just to mention the most important ones.

What they all have in common and what I was looking for is the dignity, freedom and love in every human being, the beauty within the individual if he/she can develop his/her innermost core of being, call it also holy, divine nature of all living existence.

But only when I came across the books of Bhagwan Shree Rajneesh, I found a theory which is a vessel to describe the existence phenomena without destroying it. Bhagwan's deep trust and love for the positive in every person and specifically the genius ways he developed so many powerful methods to help people in becoming whole, loving and creative makes him for me a really great teacher of our century.

I use certain forms of his meditations in my courses and I also make quotations from his discourses in my lessons. The echo of most of the students is very positive.

I really think that the USA is the right place (of course I would love to have this Master here in Switzerland, but I guess my nation is far too narrow-minded for such a potential), to allow him building his work which I understand as a better and more peaceful way of living for everyone. I would appreciate very much if the US-Immigration - Office gives him all the support which is needed.

sincerely

B. Kunz
