

Copenhagen July 19th. 1983

To whom it may concern.

I, Kjeld Andersen, a danish citizen educated as a scientist at the University of Copenhagen and worked as such for many years by research and developement where I have made several inventions from which 5 have been patented in the U.S.A., do strongly recommend the American authorities to allow Bhagwan Shree Rajneesh living and working in the U.S.A. The reasons are that he (Bhagwan) has a pronounced influence on creativity and way of thinking, who all countries in the world could benefit from and of course especially that country in which he lives. For me has the meeting with the ideas of Bhagwan given me a clarity about my feelings and body who I feel are enriching my daily life. My knowledge to Bhagwan is partly from some of his many books and tapes and from contact with his discipels, the so-called sannnyasins (I am not a sannnyasin). Through these contacts I have seen and felt how much Bhagwan has to give quite normal eople in their daily life. Spanning from couple relationship to daily working situations. My consciousness has, thanks to Bhagwan, greatly enhanced and I feel a continuous personally growth. In the hope that the democratic and tolerantly U.S.A. will allow that Bhagwan may remain in America I remain

Yours sincerely

Kjeld Andersen
