Switzerland

To whom it may concern,

J am a scientific collaborator of the MAB (Man and Biosphere) -Davos research work on three other test areas in Swiss alpin regions, the Swiss contribution to the world wide UNESCO MAB-Programm. We investigate the impact of human activity on the natural environment as well as the best use of the natural resources in a long-time view.

This year J had the occasion to visite Rancho Rajneesh which made a great impression on me: This unique experiment of recultivating a semi desert region, supported by an immense respect of nature, is just a practical realization of nature what we are treating theoretically.

It shows a way to solve the enormous ecological problems of the future.

The work of Bhagwan Shree Rajneesh and his Sannyasins is therefore of extreme importance for the future developement and of great interest for all ecologists.

It's a great honour for the USA to make this work possible, and J whould like to encourage you to give the most possible support to it.

Yours

EXHIBIT "A-865"
