

5/3 Grantham St.  
Potts Point  
Sydney, Australia  
6 July 1983

To whom it may concern,

I am a mathematician, trained at the University of Sydney, then Cambridge University and Harvard University. I have worked postdoctorally at the Middlesex Hospital Medical School in London, the National Institutes of Health, Bethesda, Maryland, and the Institute for Medical and Veterinary Science, Adelaide, Australia. I am currently the senior maintenance programmer for Lloyds Bank in Australia.

I came to know of Bhagwan Shree Rajneesh through his religious books and meditations, especially his dance meditations. Bhagwan is the only religious teacher since Pythagoras to appreciate the deep connection between really abstract pure mathematics, its playfulness and beauty, and meditation. Bhagwan's approach to creativity is identical to that practised by the world's greatest pure mathematicians whom I worked with at Harvard. I recall in particular the love of one famous Japanese algebraic geometer for Zen gardens and kites and my own Harvard supervisor's passion for wild flowers.

Yours sincerely,

Stuart William Elliott  
B.Sc. (Hons. 1), M.Sc.
