To whom it may concern.

I have graduated at Vienna University 1977 as a medical doctor and worked since then in different therapeutic institutions for Drug-Rehabilitation. This has forced me to look deeply into the psychological and social backgrounds of this kind of illness. In my search I came across Bhagwan Shree Rajneesh and His teachings and I consider these to be the most important contributions to Human Psychology in our Age! His vision and methods are incredibly powerful and radical, and tailored perfectly to the needs of this century.

In my work I and my colleagues could experience new exciting dimensions all the time, and we could observe unexpected success in many, many cases.

His methods - since they are more known and available to the public - find more and more approval in Psychology, Medicine and Education. Many University Institutes start using His knowledge and techniques as part of their programmes.

Since two years now this extraordinary mystic and scientist has been in America, and His vision becomes reality in form of the City of Rajneeshpuram, Oregon. Hundreds of thousands of disciples and friends from all over the world help in this exciting experiment of building a religious commune based on the Teachings and Guidance of this great Spiritual Leader.
